FAN3989

USB/Charger Detection Device with Load Switch

Features

- Charger/USB Detection Device with Load Switch
- Charger/USB Device Detection Flag
- Over/Under-Voltage Detection Flag
- Load Switch Output, Up to 1.5A Charge Current
- V_{BUS} Supply: 2.7V to 20V
- C_{ON} : 1.5pF
- Package: 8-Lead MLP

Applications

- Mobile Phones
- Handheld Devices

Related Resources

- [AN-5067 — PCB Land Pattern Design and Surface Mount Guidelines for MLP Packages](#)

Description

The FAN3989 is a USB connection monitoring device used to determine if a standard USB device is connected or a battery-charging device is connected.

The FAN3989 sets the FLAG1 pin to logic HIGH or LOW as an indicator to the system controller that a standard USB device or a charger is connected to the USB port. The FAN3989 also monitors the V_{BUS} for over- or under-voltage conditions. The FLAG2 pin is set LOW if V_{BUS} is less than 3.3V or greater than 6.0V. The internal load switch control pin is set HIGH if V_{BUS} is less than 3.3V or greater than 6.0V, turning off the PMOS switch.

The FAN3989 is available in a very small 8-lead MLP package suitable for small board space applications, like mobile phones.

Ordering Information

Part Number	Operating Temperature Range	Package	Packing Method	Quantity
FAN3989MLP8X	-40°C to +85°C	8-Lead Molded Leadless Package (MLP)	Reel	3000

Figure 1. Block Diagram

Pin Configuration

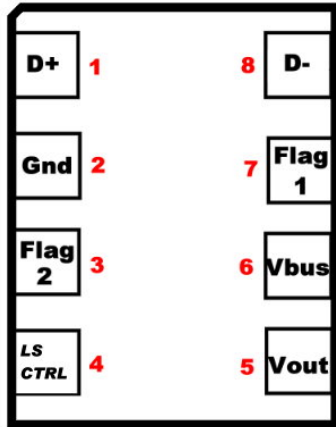

Figure 2. Pin Configuration (Top View)

Figure 3. Pin Configuration (Bottom View)

Pin Definitions

Pin#	Name	Type	Description
1	D+	Input	USB Data Input
2	GND	Input	Device Ground
3	Flag2	Output	Over-/Under-Voltage Flag Output
4	LSCTRL	Output	PMOS Switch Control – Pull-Up Connection to V_{BUS}
5	V_{OUT}	Output	Voltage Out – Connection also on Package DAP (see <i>PCB Layout Guideline section</i>)
6	V_{BUS}	Input	Power Input from Charger, USB Device, or Handheld Battery
7	Flag1	Output	Charger / Standard USB Device Detect Flag
8	D-	Input	USB Data Input

Truth Table

Connection State	V_{BUS}	D-	D+	FLAG1	FLAG2	LS CTRL	Description
STD USB Device	0V	R to GND	R to VDD	LOW	LOW	HIGH	Load switch open
STD USB Device	5V	R to GND	R to VDD	LOW	HIGH	LOW	Load switch closed
USB Charger	5V	Short to D+	Short to D-	HIGH	HIGH	LOW	Normal state, load switch closed
V_{BUS} GT 6V	GT 6V	Short to D+	Short to D-	HIGH	LOW	HIGH	Load switch open
V_{BUS} LT 3.3V	LT 3.3V	Short to D+	Short to D-	HIGH	LOW	HIGH	Load switch open
PC Charger	5V	Open	Open	LOW	HIGH	LOW	Load switch closed

Absolute Maximum Ratings

Stresses exceeding the absolute maximum ratings may damage the device. The device may not function or be operable above the recommended operating conditions and stressing the parts to these levels is not recommended. In addition, extended exposure to stresses above the recommended operating conditions may affect device reliability. The absolute maximum ratings are stress ratings only.

Symbol	Parameter	Min.	Max.	Unit
V_S	DC Supply Voltage	-0.3	20.0	V
V_{IO}	Analog and Digital I/O	-0.3	$V_{CC}+0.3$	V

Reliability Information

Symbol	Parameter	Min.	Typ.	Max.	Unit
T_J	Junction Temperature			+150	°C
T_{STG}	Storage Temperature Range	-65		+150	°C
Θ_{JA}	Thermal Resistance, JEDEC Standard, Multilayer Test Boards, Still Air		41		°C/W

Electrostatic Discharge Information

Symbol	Parameter	Max.	Unit
ESD	Human Body Model, JESD22-A114	3	kV
	Charged Device Model, JESD22-C101	1	

Recommended Operating Conditions

The Recommended Operating Conditions table defines the conditions for actual device operation. Recommended operating conditions are specified to ensure optimal performance to the datasheet specifications. Fairchild does not recommend exceeding them or designing to Absolute Maximum Ratings.

Symbol	Parameter	Min.	Typ.	Max.	Unit
T_A	Operating Temperature Range	-40		+85	°C
V_{CC}	Supply Voltage Range	2.7	5.0	20.0	V

DC Electrical Characteristics

$T_A = 25^\circ\text{C}$, $V_{CC} = 5.0\text{V}$, unless otherwise noted.

Symbol	Parameter	Conditions	Min.	Typ.	Max.	Units
Supply						
V_S	Supply Voltage Range	V_S Range	2.7	5.0	20.0	V

Figure 11. Standard USB Charger Plug-In

Applications Information

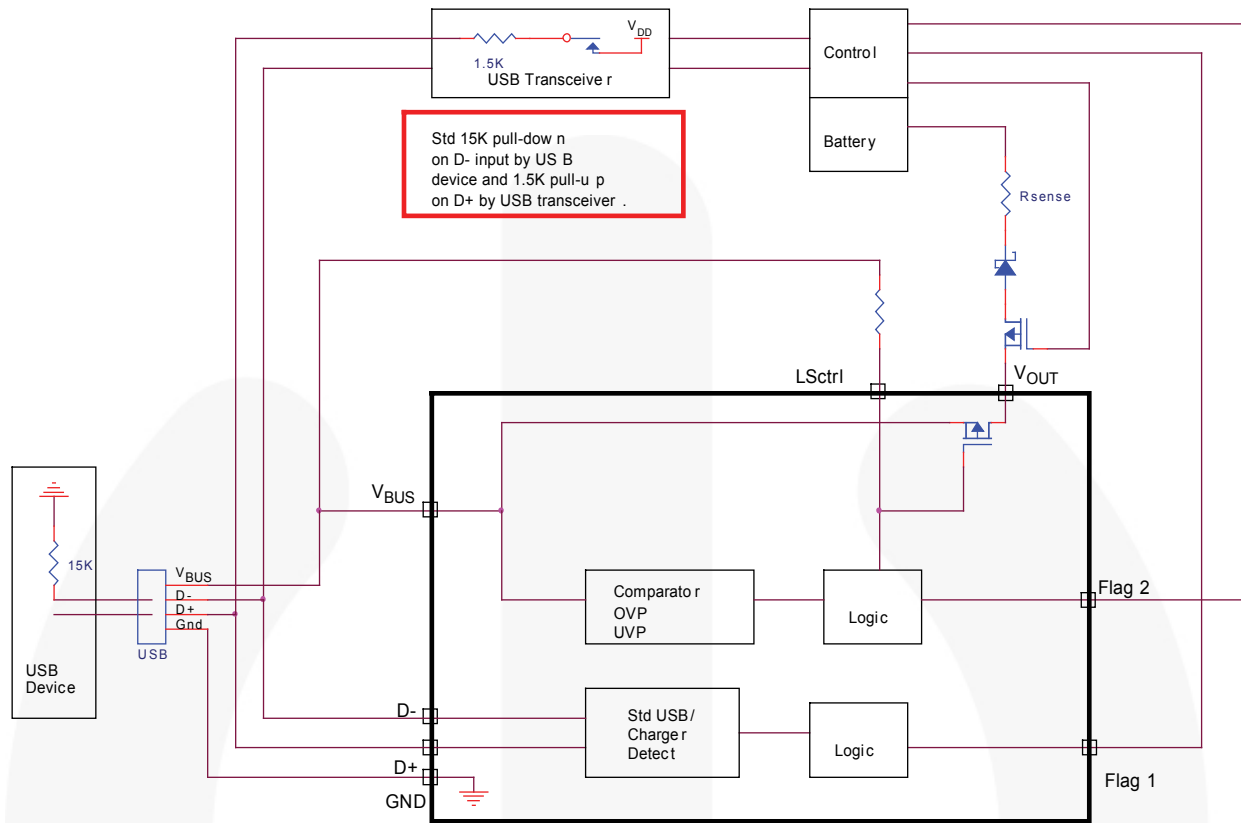

Figure 12. Mobile Phone Battery Charging System with USB Interface

The FAN3989 sets the FLAG1 pin to logic HIGH or LOW as an indicator to the system controller that a standard USB device or a charger is connected to the USB port. The FAN3989 also monitors the V_{BUS} for over- or under-voltage conditions. If V_{BUS} is less than 3.3V or greater than 6.0V, the FLAG2 pin is set LOW and the internal load switch control pin is set HIGH, turning off the PMOS switch.

In a standard USB configuration, there is a switch in the USB transceiver that is always on in full-speed mode. It is on during the transition from full-speed to high-speed mode and turned off after enumeration is

complete. If D+ and D- are shorted when a charger is plugged into the USB port, the USB switch is on and pulled to V_{DD} , which is about 3V, making both D+ and D- HIGH. Flag1 is also set HIGH, indicating that a charging device is connected to the port. If D+ and D- are connected to a standard USB device, the D+ is pulled to V_{DD} and D- is set low (due to the 15KΩ pull-down resistor on the USB device) and flag1 is LOW. If D+ and D- are open (floating), D+ is pulled to V_{DD} and D- floats LOW, which makes flag1 LOW.

Applications Information (Continued)

Figure 13. Mobile Phone Battery Charging System without USB Interface

The FAN3989 sets the FLAG1 pin to logic HIGH or LOW as an indicator to the system controller that a standard USB device or a charger is connected to the USB port. The FAN3989 also monitors the V_{BUS} for over- or under-voltage conditions. If V_{BUS} is less than 3.3V or greater than 6.0V, the FLAG2 pin is set LOW and the internal load switch control pin is set HIGH, turning off the PMOS switch.

Where a USB transceiver is not incorporated or there is a switch between the USB port and the FAN3989, external resistors are used to set the correct input logic states on the D+ and D- inputs. A 5MΩ pull-down on the D- line and a 1MΩ pull-up to V_{DD} on the D+ line are recommended. If a charger is plugged into

the USB port (D+ and D- shorted), the voltage divider of 1M and 5M put a voltage of 2.3V on the D+D- inputs and flag1 is HIGH, indicating a charger is connected to port.

If the USB port is connected to a standard USB device, the D+ input is pulled up to V_{DD} and is in parallel with the 1.5KΩ on a USB transceiver with a parallel R value of 1.497KΩ. The D- input is connected to a 15KΩ pull-down by the USB device and in parallel with 5MΩ with a parallel R value of 14.955KΩ. This condition forces flag1 LOW. If D+ and D- are open (floating), D+ is pulled to V_{DD} and D- floats LOW, which forces flag1 LOW.

PCB Layout Guidelines

Please also see Fairchild Semiconductor applications note AN-5067 — PCB Land Pattern Design and Surface Mount Guidelines for MLP Packages

Pad1

This exposed DAP is connected to the internal FET drain and labeled V_{OUT} on the device. The pad should be connected to V_{OUT} pin of the device or left floating. It

should never be connected to the ground, power plane, or Pad2.

Pad2

This exposed DAP is connected to an internal die substrate that is at a ground potential. The pad should be left floating or can be connected to ground plane. This pad should never be connected to Pad1 or the power plane.

DISCLAIMER

FAIRCHILD SEMICONDUCTOR RESERVES THE RIGHT TO MAKE CHANGES WITHOUT FURTHER NOTICE TO ANY PRODUCTS HEREIN TO IMPROVE RELIABILITY, FUNCTION, OR DESIGN. FAIRCHILD DOES NOT ASSUME ANY LIABILITY ARISING OUT OF THE APPLICATION OR USE OF ANY PRODUCT OR CIRCUIT DESCRIBED HEREIN; NEITHER DOES IT CONVEY ANY LICENSE UNDER ITS PATENT RIGHTS, NOR THE RIGHTS OF OTHERS. THESE SPECIFICATIONS DO NOT EXPAND THE TERMS OF FAIRCHILD'S WORLDWIDE TERMS AND CONDITIONS, SPECIFICALLY THE WARRANTY THEREIN, WHICH COVERS THESE PRODUCTS.

LIFE SUPPORT POLICY

FAIRCHILD'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF FAIRCHILD SEMICONDUCTOR CORPORATION.

As used herein:

- Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body or (b) support or sustain life, and (c) whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury of the user.
- A critical component in any component of a life support, device, or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.

ANTI-COUNTERFEITING POLICY

Fairchild Semiconductor Corporation's Anti-Counterfeiting Policy. Fairchild's Anti-Counterfeiting Policy is also stated on our external website, www.fairchildsemi.com, under Sales Support.

Counterfeiting of semiconductor parts is a growing problem in the industry. All manufacturers of semiconductor products are experiencing counterfeiting of their parts. Customers who inadvertently purchase counterfeit parts experience many problems such as loss of brand reputation, substandard performance, failed applications, and increased cost of production and manufacturing delays. Fairchild is taking strong measures to protect ourselves and our customers from the proliferation of counterfeit parts. Fairchild strongly encourages customers to purchase Fairchild parts either directly from Fairchild or from Authorized Fairchild Distributors who are listed by country on our web page cited above. Products customers buy either from Fairchild directly or from Authorized Fairchild Distributors are genuine parts, have full traceability, meet Fairchild's quality standards for handling and storage and provide access to Fairchild's full range of up-to-date technical and product information. Fairchild and our Authorized Distributors will stand behind all warranties and will appropriately address any warranty issues that may arise. Fairchild will not provide any warranty coverage or other assistance for parts bought from Unauthorized Sources. Fairchild is committed to combat this global problem and encourage our customers to do their part in stopping this practice by buying direct or from authorized distributors.

PRODUCT STATUS DEFINITIONS

Definition of Terms

Datasheet Identification	Product Status	Definition
Advance Information	Formative / In Design	Datasheet contains the design specifications for product development. Specifications may change in any manner without notice.
Preliminary	First Production	Datasheet contains preliminary data; supplementary data will be published at a later date. Fairchild Semiconductor reserves the right to make changes at any time without notice to improve design.
No Identification Needed	Full Production	Datasheet contains final specifications. Fairchild Semiconductor reserves the right to make changes at any time without notice to improve the design.
Obsolete	Not In Production	Datasheet contains specifications on a product that is discontinued by Fairchild Semiconductor. The datasheet is for reference information only.
