## 1200 V Motion SPM® 2 Series

### Features

- UL Certified No. E209204 (UL1557)
- 1200 V - 10 A 3-Phase IGBT Inverter, Including Control ICs for Gate Drive and Protections
- Low-Loss, Short-Circuit-Rated IGBTs
- Very Low Thermal Resistance Using Al<sub>2</sub>O<sub>3</sub> DBC Substrate
- Built-In Bootstrap Diodes and Dedicated Vs Pins Simplify PCB Layout
- Separate Open-Emitter Pins from Low-Side IGBTs for Three-Phase Current Sensing
- Single-Grounded Power Supply Supported
- Built-In NTC Thermistor for Temperature Monitoring and Management
- Adjustable Over-Current Protection via Integrated Sense-IGBTs
- Isolation Rating of 2500 Vrms / 1 min.

### Applications

- Motion Control - Industrial Motor (AC 400 V Class)

### General Description

The FNA21012A is a Motion SPM® 2 module providing a fully-featured, high-performance inverter output stage for AC induction, BLDC, and PMSM motors. These modules integrate optimized gate drive of the built-in IGBTs to minimize EMI and losses, while also providing multiple on-module protection features: under-voltage lockouts, over-current shutdown, temperature sensing, and fault reporting. The built-in, high-speed HVIC requires only a single supply voltage and translates the incoming logic-level gate inputs to high-voltage, high-current drive signals to properly drive the module's internal IGBTs. Separate negative IGBT terminals are available for each phase to support the widest variety of control algorithms.

### Intergrated Power Functions

- 1200 V - 10 A IGBT inverter for three-phase DC / AC power conversion (refer to Figure 3)

### Intergrated Drive, Protection, and System Control Functions

- For inverter high-side IGBTs: gate-drive circuit, high-voltage isolated high-speed level-shifting control circuit, Under-Voltage Lock-Out Protection (UVLO), Available bootstrap circuit example is given in Figures 5 and 15.
- For inverter low-side IGBTs: gate-drive circuit, Short-Circuit Protection (SCP) control circuit, Under-Voltage Lock-Out Protection (UVLO)
- Fault signaling: corresponding to UV (low-side supply) and SC faults
- Input interface: active-HIGH interface, works with 3.3 / 5 V logic, Schmitt-trigger input

		at $T_{TH} = 100^\circ\text{C}$		-	2.9	-	k $\Omega$

**Notes:**

- Short-circuit current protection functions only at the low-sides because the sense current is divided from main current at low-side IGBTs. Inserting the shunt resistor for monitoring the phase current at  $N_U$ ,  $N_V$ ,  $N_W$  terminal, the trip level of the short-circuit current is changed.
- The fault-out pulse width  $t_{FOD}$  depends on the capacitance value of  $C_{FOD}$  according to the following approximate equation :  $t_{FOD} = 0.8 \times 10^6 \times C_{FOD} [s]$ .
- $T_{TH}$  is the temperature of thermistor itself. To know case temperature ( $T_C$ ), conduct experiments considering the application.

**Notes:**

- 12. Do not over torque when mounting screws. Too much mounting torque may cause DBC cracks, as well as bolts and Al heat-sink destruction.
- 13. Avoid one-sided tightening stress. Figure 10 shows the recommended torque order for the mounting screws. Uneven mounting can cause the DBC substrate of package to be damaged. The pre-screwing torque is set to 20 ~ 30% of maximum torque rating.

### Input/Output Interface Circuit

**Figure 14. Recommended MCU I/O Interface Circuit**

**Note:**

14. RC coupling at each input (parts shown dotted) might change depending on the PWM control scheme used in the application and the wiring impedance of the application's printed circuit board. The input signal section of the Motion SPM 2 product integrates 5 kΩ (typ.) pull-down resistor. Therefore, when using an external filtering resistor, please pay attention to the signal voltage drop at input terminal.

Figure 15. Typical Application Circuit

Notes:

15. To avoid malfunction, the wiring of each input should be as short as possible (less than 2 - 3 cm).
16.  $V_{FO}$  output is an open-drain type. This signal line should be pulled up to the positive side of the MCU or control power supply with a resistor that makes  $I_{FO}$  up to 2 mA. Please refer to Figure 14.
17. Fault out pulse width can be adjust by capacitor  $C_5$  connected to the  $C_{FOD}$  terminal.
18. Input signal is active-HIGH type. There is a 5 k $\Omega$  resistor inside the IC to pull-down each input signal line to GND. RC coupling circuits should be adopted for the prevention of input signal oscillation.  $R_1C_1$  time constant should be selected in the range 50 ~ 150 ns (recommended  $R_1 = 100 \Omega$ ,  $C_1 = 1$  nF).
19. Each wiring pattern inductance of point A should be minimized (recommend less than 10 nH). Use the shunt resistor  $R_4$  of surface mounted (SMD) type to reduce wiring inductance. To prevent malfunction, wiring of point E should be connected to the terminal of the shunt resistor  $R_4$  as close as possible.
20. To insert the shunt resistor to measure each phase current at  $N_U$ ,  $N_V$ ,  $N_W$  terminal, it makes to change the trip level  $I_{SC}$  about the short-circuit current.
21. To prevent errors of the protection function, the wiring of points B, C, and D should be as short as possible. The wiring of B between  $C_{SC}$  filter and  $R_{SC}$  terminal should be divided at the point that is close to the terminal of sense resistor  $R_5$ .
22. For stable protection function, use the sense resistor  $R_5$  with resistance variation within 1% and low inductance value.
23. In the short-circuit protection circuit, select the  $R_6C_6$  time constant in the range 1.0 ~ 1.5  $\mu$ s.  $R_6$  should be selected with a minimum of 10 times larger resistance than sense resistor  $R_5$ . Do enough evaluation on the real system because short-circuit protection time may vary wiring pattern layout and value of the  $R_6C_6$  time constant.
24. Each capacitor should be mounted as close to the pins of the Motion SPM® 2 product as possible.
25. To prevent surge destruction, the wiring between the smoothing capacitor  $C_7$  and the P & GND pins should be as short as possible. The use of a high-frequency non-inductive capacitor of around 0.1 ~ 0.22  $\mu$ F between the P & GND pins is recommended.
26. Relays are used in most systems of electrical equipments in industrial application. In these cases, there should be sufficient distance between the CPU and the relays.
27. The Zener diode or transient voltage suppressor should be adapted for the protection of ICs from the surge destruction between each pair of control supply terminals (recommended Zener diode is 22 V / 1 W, which has the lower Zener impedance characteristic than about 15  $\Omega$ ).
28.  $C_2$  of around seven times larger than bootstrap capacitor  $C_3$  is recommended.
29. Please choose the electrolytic capacitor with good temperature characteristic in  $C_3$ . Choose 0.1 ~ 0.2  $\mu$ F R-category ceramic capacitors with good temperature and frequency characteristics in  $C_4$ .

## Detailed Package Outline Drawings (FNA21012A)

- NOTES: UNLESS OTHERWISE SPECIFIED
- A) THIS PACKAGE DOES NOT COMPLY TO ANY CURRENT PACKAGING STANDARD
  - B) ALL DIMENSIONS ARE IN MILLIMETERS
  - C) DIMENSIONS ARE EXCLUSIVE OF BURRS, MOLD FLASH, AND TIE BAR EXTRUSIONS
  - D) PACKAGE SURFACE VOID SHALL NOT EXCEED 2.3 x 2.3 x 1.0mm
  - E) ( ) IS REFERENCE
  - F) [ ] IS ASS'Y QUALITY
  - G) DRAWING FILENAME: MOD34BAREV2.0
  - H) FAIRCHILD SEMICONDUCTOR

Package drawings are provided as a service to customers considering Fairchild components. Drawings may change in any manner without notice. Please note the revision and/or data on the drawing and contact a FairchildSemiconductor representative to verify or obtain the most recent revision. Package specifications do not expand the terms of Fairchild's worldwide therm and conditions, specifically the the warranty therein, which covers Fairchild products.

**DISCLAIMER**

FAIRCHILD SEMICONDUCTOR RESERVES THE RIGHT TO MAKE CHANGES WITHOUT FURTHER NOTICE TO ANY PRODUCTS HEREIN TO IMPROVE RELIABILITY, FUNCTION, OR DESIGN. FAIRCHILD DOES NOT ASSUME ANY LIABILITY ARISING OUT OF THE APPLICATION OR USE OF ANY PRODUCT OR CIRCUIT DESCRIBED HEREIN; NEITHER DOES IT CONVEY ANY LICENSE UNDER ITS PATENT RIGHTS, NOR THE RIGHTS OF OTHERS. THESE SPECIFICATIONS DO NOT EXPAND THE TERMS OF FAIRCHILD'S WORLDWIDE TERMS AND CONDITIONS, SPECIFICALLY THE WARRANTY THEREIN, WHICH COVERS THESE PRODUCTS.

**LIFE SUPPORT POLICY**

FAIRCHILD'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF FAIRCHILD SEMICONDUCTOR CORPORATION.

As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body or (b) support or sustain life, and (c) whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury of the user.
2. A critical component in any component of a life support, device, or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.

**ANTI-COUNTERFEITING POLICY**

Fairchild Semiconductor Corporation's Anti-Counterfeiting Policy. Fairchild's Anti-Counterfeiting Policy is also stated on our external website, [www.fairchildsemi.com](http://www.fairchildsemi.com), under Sales Support.

Counterfeiting of semiconductor parts is a growing problem in the industry. All manufacturers of semiconductor products are experiencing counterfeiting of their parts. Customers who inadvertently purchase counterfeit parts experience many problems such as loss of brand reputation, substandard performance, failed applications, and increased cost of production and manufacturing delays. Fairchild is taking strong measures to protect ourselves and our customers from the proliferation of counterfeit parts. Fairchild strongly encourages customers to purchase Fairchild parts either directly from Fairchild or from Authorized Fairchild Distributors who are listed by country on our web page cited above. Products customers buy either from Fairchild directly or from Authorized Fairchild Distributors are genuine parts, have full traceability, meet Fairchild's quality standards for handling and storage and provide access to Fairchild's full range of up-to-date technical and product information. Fairchild and our Authorized Distributors will stand behind all warranties and will appropriately address any warranty issues that may arise. Fairchild will not provide any warranty coverage or other assistance for parts bought from Unauthorized Sources. Fairchild is committed to combat this global problem and encourage our customers to do their part in stopping this practice by buying direct or from authorized distributors.

**PRODUCT STATUS DEFINITIONS**

**Definition of Terms**

Datasheet Identification	Product Status	Definition
Advance Information	Formative / In Design	Datasheet contains the design specifications for product development. Specifications may change in any manner without notice.
Preliminary	First Production	Datasheet contains preliminary data; supplementary data will be published at a later date. Fairchild Semiconductor reserves the right to make changes at any time without notice to improve design.
No Identification Needed	Full Production	Datasheet contains final specifications. Fairchild Semiconductor reserves the right to make changes at any time without notice to improve the design.
Obsolete	Not In Production	Datasheet contains specifications on a product that is discontinued by Fairchild Semiconductor. The datasheet is for reference information only.
