FPF2498
Adjustable OVP with 28 V Input OVT Load Switch

Features

Function	Advanced Load Switch
Input	3.5 – 12 V
Features	28 V Absolute Ratings on VIN 1.7 A Maximum Continuous Current Capability 80 mΩ R_{ON} Typical Over-Voltage Protection (OVP) Over-Current Protection (OCP) Thermal Shutdown Under-Voltage Lockout (UVLO) Reverse Current Blocking (RCB)
ESD	15 kV IEC 61000-4-2 Air Gap
Operating Temperature Range	-40 to +85°C
Package	6-Ball WLCSP (1.05 x 1.3 x 0.625 mm, 0.4 mm Pitch)
Ordering Information	FPF2498BUCX
Top Mark	TK

Description

The FPF2498 advanced load-management switch targets applications requiring a highly integrated solution. It disconnects loads powered from the DC power rail (<12 V) with stringent off-state current targets and high load capacitances (<100 µF). The FPF2498 consists of a slew-rate controlled low-impedance MOSFET switch. FPF2498 has over-voltage protection and over-temperature protection.

Applications

- Cellular Phones, Smart Phones
- Tablets

Absolute Maximum Ratings

Stresses exceeding the absolute maximum ratings may damage the device. The device may not function or be operable above the recommended operating conditions and stressing the parts to these levels is not recommended. In addition, extended exposure to stresses above the recommended operating conditions may affect device reliability. The absolute maximum ratings are stress ratings only.

Operation and Application Description

Input Capacitor

To limit the voltage drop on the input supply caused by transient inrush current when the switch turns on into discharge load capacitor; a capacitor must be placed between the VIN and GND pins. A high-value C_{IN} capacitor can be used to reduce the voltage drop in high-current applications.

Output Capacitor

An output capacitor should be placed between the VOUT and GND pins. This capacitor prevents parasitic board inductance from forcing V_{OUT} below ground when the switch is on. This capacitor also prevents reverse inrush current from creating a voltage spike that could damage the device in the case of a V_{OUT} short.

Fault Reporting

Upon the detection of an over-voltage, over-current, or over-temperature condition, the FLAGB signals the fault by activating LOW.

Under-Voltage Lockout (UVLO)

The under-voltage lockout turns the switch off if the input voltage drops below the lockout threshold. With the ON pin active, the input voltage rising above the UVLO threshold releases the lockout and enables the switch.

Over-Voltage Lockout (OVLO)

The OVLO pin sets the over-voltage lockout trip point with a resistor-divider network. OVLO adjustment is set by R1 and R2 and is compared to 1.2 V – V_{IN} × R2 / (R1+R2) >1.2 V. when $V_{IN} > V_{OVLO}$ the switch turns off to ensure protection to devices connected to VOUT. A 1 MΩ or larger resistor is recommended on R1 to reduce standby power consumption. To use the default values of 5.8 V for V_{OVLO}, connect the OVLO pin directly to GND.

Reverse-Current Blocking (RCB)

The reverse-current blocking feature protects the input source against current flow from output to input. When the load switch is OFF, no current flows from the output to input.

Thermal Shutdown (TSD)

Thermal shutdown protects the die from internally or externally generated excessive temperature. During an over-temperature condition, the switch is turned off. The switch automatically turns on again if the temperature of the die drops below the threshold temperature.

Current Limit

The current limit ensures that the current flow though the switch doesn't exceed a maximum value, which can damage the device. If the current flow though the switch exceeds the trip point, the switch turns off and enters the blanking time. After the blanking time, the switch is re-enabled and checks if the fault still exists.

Board Layout

For best performance, all traces should be as short as possible. The input and output capacitors should be placed close to the device to minimize the effect that parasitic trace inductance may have on normal and short-circuit operation. Using wide traces for VIN, VOUT, GND minimizes parasitic electrical effects along with minimizing the case-to-ambient thermal impedance.

AUTHORIZED USE

Unless otherwise specified in this data sheet, this product is a standard commercial product and is not intended for use in applications that require extraordinary levels of quality and reliability. This product may not be used in the following applications, unless specifically approved in writing by a Fairchild officer: (1) automotive or other transportation, (2) military/aerospace, (3) any safety critical application – including life critical medical equipment – where the failure of the Fairchild product reasonably would be expected to result in personal injury, death or property damage. Customer's use of this product is subject to agreement of this Authorized Use policy. In the event of an unauthorized use of Fairchild's product, Fairchild accepts no liability in the event of product failure. In other respects, this product shall be subject to Fairchild's Worldwide Terms and Conditions of Sale, unless a separate agreement has been signed by both Parties.

ANTI-COUNTERFEITING POLICY

Fairchild Semiconductor Corporation's Anti-Counterfeiting Policy. Fairchild's Anti-Counterfeiting Policy is also stated on our external website, www.fairchildsemi.com, under Terms of Use

Counterfeiting of semiconductor parts is a growing problem in the industry. All manufacturers of semiconductor products are experiencing counterfeiting of their parts. Customers who inadvertently purchase counterfeit parts experience many problems such as loss of brand reputation, substandard performance, failed applications, and increased cost of production and manufacturing delays. Fairchild is taking strong measures to protect ourselves and our customers from the proliferation of counterfeit parts. Fairchild strongly encourages customers to purchase Fairchild parts either directly from Fairchild or from Authorized Fairchild Distributors who are listed by country on our web page cited above. Products customers buy either from Fairchild directly or from Authorized Fairchild Distributors are genuine parts, have full traceability, meet Fairchild's quality standards for handling and storage and provide access to Fairchild's full range of up-to-date technical and product information. Fairchild and our Authorized Distributors will stand behind all warranties and will appropriately address any warranty issues that may arise. Fairchild will not provide any warranty coverage or other assistance for parts bought from Unauthorized Sources. Fairchild is committed to combat this global problem and encourage our customers to do their part in stopping this practice by buying direct or from authorized distributors.
