FUSB301A
Autonomous USB Type-C Controller with Configurable I²C Address

Features

- Fully Autonomous Type-C Controller Supports Type-C Versions 1.1 and 1.0
- V_{DD} Operating Range, 3.0 V- 5.5 V
- Low Disable Power: I_{CC} = 2.0 µA (Max.)
- Low Standby Power: I_{CC} = 7.0 µA (Max.)
- DRP Mode with Optional Accessory Support
- Configurable I²C Address
- Capable of Supporting Try.SNK and Try.SRC
- Dead Battery Support (SINK Support when No Power Applied)
- 2 kV HBM ESD Protection
- Small Packaging, 12 Lead TMLP (1.6 mm x 1.6 mm x 0.375 mm)

Description

The FUSB301A is a fully autonomous Type-C controller optimized for <15 W applications. The FUSB301A offers CC logic detection for Source Mode, Sink Mode, DRP, accessory detection support, and dead battery support. The FUSB301A features configurable I²C address to support multiple ports per system. The FUSB301A features an extremely low power disable mode as well as low power during normal operation. It is available in an ultra thin, 12-Lead TMLP package.

Applications

- Smartphones
- Tablets
- Notebooks
- Ultra Portable Applications

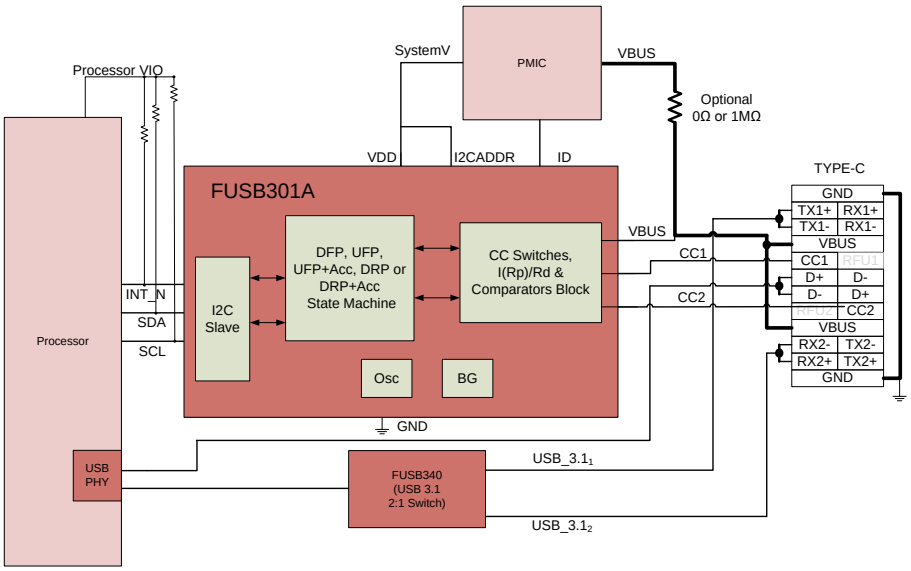

Figure 1. Typical Application

Ordering Information

Part Number	Top Mark	Operating Temperature Range	Package	Packing Method
FUSB301ATMX	NX	-40 to 85°C	12-Lead Ultra-thin Molded Leadless Package (TMLP) 1.6 mm x 1.6 mm x 0.375 mm	Tape and Reel

Block Diagram

Pin Configuration

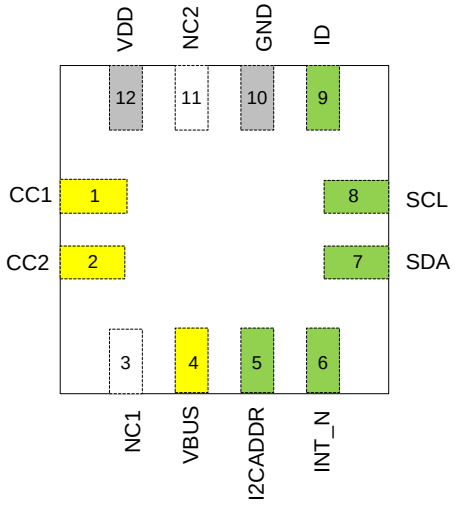

Figure 3. Pin Assignment (Top Through View)

Pin Descriptions

Pin #	Name	Type	Description
USB Type-C Connector Interface			
1, 2	CC1, CC2	I/O	Type-C Configuration Channel
4	VBUS	Input	VBUS input pin for attach and detach detection
10	GND	Ground	Ground
Power Interface			
12	VDD	Power	Input Supply Voltage
Signal Interface			
8	SCL	Input	I^2C serial clock signal to be connected to the I^2C master.
7	SDA	Open-Drain I/O	I^2C serial data signal to be connected to the I^2C master
6	INT_N	Open-Drain Output	Active LOW open drain interrupt output used to prompt the processor to read the I^2C register bits
9	ID	Open-Drain Output	Used to Identify if connected device is Source or Sink. The ID Pin can be used to interface with USB2.0 Input on the processor.
5	I2CADDR	Input	Used to change bit 3 of the I2C address so that multiple addresses can be used in a system where two device addresses conflict
3	NC1	NC	No Connect – Tie to Ground or Float
11	NC2	NC	No Connect – Tie to Ground or Float

Dead Battery

If power is not applied to FUSB301A and it is attached to a Source device, then the Source would pull up the CC line connected through the cable. The FUSB301A in response would turn on the pull-down that will bring the CC voltage to a range that the Source can detect an attach and turn on VBUS.

Power Up, Initialization and Reset, Interrupt Operation

When power is first applied, the FUSB301A will power up in Sink mode with all interrupts masked. The local processor must configure the FUSB301A to the desired mode and clear the global interrupt mask bit, INT_MASK. The INT_N pin is an active low, open drain output. This pin indicates to the host processor that an interrupt has occurred in the FUSB301A which needs attention. The INT_N pin is in a high impedance state by default after power-up or device reset, and the global interrupt mask (INT_MASK in Control register) is set. After INT_MASK bit is cleared by the local processor, the INT_N pin stays high impedance in preparation of future interrupts. When an interruptible event occurs, INT_N is driven LOW and is in a high impedance state again when the processor clears the interrupt by reading the interrupt registers. Subsequent to the initial power up or reset; if the processor writes a “1” to global interrupt mask bit when the system is already powered up, the INT_N pin stays in a high impedance state and ignores all interrupts until the global interrupt mask bit is cleared. If an event happens that would ordinarily cause an interrupt when the global interrupt mask bit is set, the INT_N pin goes LOW when the global interrupt mask is cleared.

Table 1. ID Pin Truth Table

TYPE Register (h12, bit 4)	Description	ID
SINK = b0	SINK Not Detected	Hi-Z (default)
SINK = b1	SINK Detected	Low

Absolute Maximum Ratings

Stresses exceeding the absolute maximum ratings may damage the device. The device may not function or be operable above the recommended operating conditions and stressing the parts to these levels is not recommended. In addition, extended exposure to stresses above the recommended operating conditions may affect device reliability. The absolute maximum ratings are stress ratings only.

Symbol	Parameter			Min.	Max.	Unit
V_{DD}	Supply Voltage from V_{DD}			-0.5	6.0	V
V_{BUS}	VBUS supply voltage			-0.5	28	V
V_{CC_HDDRP}	CC pins when configured as Host, Device or Dual Role Port			-0.5	6.0	V
$T_{STORAGE}$	Storage Temperature Range			-65	+150	C
T_J	Maximum Junction Temperature				+150	C
T_L	Lead Temperature (Soldering, 10 seconds)				+260	C
ESD	IEC 61000-4-2 System ESD	Connector Pins (VBUS, CC1 & CC2)	Air Gap	15		kV
			Contact	8		
	Human Body Model, JEDEC JESD22-A114	Connector Pins (VBUS, CC1 and CC2)		4		kV
		Others		2		
	Charged Device Model, JEDEC LESD22-C101	All Pins		1		

Recommended Operating Conditions

The Recommended Operating Conditions table defines the conditions for actual device operation. Recommended operating conditions are specified to ensure optimal performance. Fairchild does not recommend exceeding them or designing to Absolute Maximum Ratings.

Symbol	Parameter	Min.	Typ.	Max.	Unit
V_{BUS}	VBUS Supply Voltage	3.7	5.0	21	V
V_{DD}	Supply Voltage	2.8[(1)]	3.3	5.5	V
T_A	Operating Temperature	-40		+85	C

Note:

1. This is for functional operation only and isn't the lowest limit for all subsequent electrical specifications below. All electrical parameters have a minimum of 3 V operation.

DC and Transient Characteristics

Unless otherwise specified: Recommended T_A and T_J temperature ranges. All typical values are at T_A=25°C and V_{DD}=3.3 V unless otherwise specified.

Symbol	Parameter	T_A = -40 to +85°C T_J=-40 to +125°C			Unit
		Min.	Typ.	Max	
Type C Specific Parameters					
I_{80_CCX}	Source 80 µA CC Current (Default) HOST_CUR1=0, HOST_CUR0=1	64	80	96	µA
I_{180_CCX}	SOURCE 180 µA CC Current (1.5 A) HOST_CUR1=1, HOST_CUR0=0	166	180	194	µA
I_{330_CCX}	SOURCE 330 µA CC Current (3 A) HOST_CUR1=1, HOST_CUR0=1	304	330	356	µA
V_{SNKDB}	SINK Pull-Down Voltage in Dead Battery Under all Pull-up SOURCE Loads			2.18	V
R_{DEVICE}	Device Pull-Down Resistance when VDD is within Operating Range	4.6	5.1	5.6	kΩ
zOPEN	CC Resistance for Disabled State	126			kΩ
vRa-SRCdef	Ra Detection Threshold for CC Pin for Source for Default Current on VBUS	0.15	0.20	0.25	V

Note:

2. Guaranteed by characterization. Not production tested.

Fast Mode I²C Specifications[3] *(see Figure 4)*

Symbol	Parameter	Fast Mode		
		Min.	Max.	Unit
f_{SCL}	I2C_SCL Clock Frequency	0	400	kHz
$t_{HD;STA}$	Hold Time (Repeated) START Condition	0.6		µs
t_{LOW}	LOW Period of I2C_SCL Clock	1.3		µs
t_{HIGH}	HIGH Period of I2C_SCL Clock	0.6		µs
$t_{SU;STA}$	Set-up Time for Repeated START Condition	0.6		µs
$t_{HD;DAT}$	Data Hold Time	0	0.9	µs
$t_{SU;DAT}$	Data Set-up Time[4]	100		ns
t_r	Rise Time of I2C_SDA and I2C_SCL Signals[5]	20*(V_{DD}/5.5 V)	250	ns
t_f	Fall Time of I2C_SDA and I2C_SCL Signals[5]	20*(V_{DD}/5.5 V)	250	ns
$t_{SU;STO}$	Set-up Time for STOP Condition	0.6		µs
t_{BUF}	BUS-Free Time between STOP and START Conditions	1.3		µs
t_{SP}	Pulse Width of Spikes that Must Be Suppressed by the Input Filter	0	50	ns

Notes:

3. Guaranteed by characterization. Not production tested
4. A fast-mode I²C-bus device can be used in a standard-mode I²C-bus system, but the requirement $t_{SU;DAT} \geq$ 250 ns must be met. This is automatically the case if the device does not stretch the LOW period of the I2C_SCL signal. If such a device does stretch the LOW period of the I2C_SCL signal, it must output the next data bit to the I2C_SDA line tr_max + $t_{SU;DAT}$ = 1000 + 250 = 1250 ns (according to the standard-mode I²C bus specification) before the I2C_SCL line is released.
5. Cb equals the total capacitance of one bus line in pF. If mixed with high-speed devices, faster fall times are allowed according to the I²C specification.

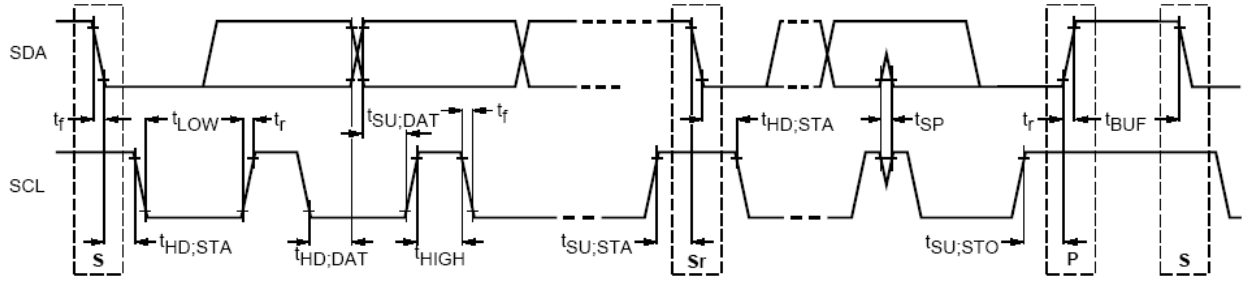

Figure 4. Definition of Timing for Full-Speed Mode Devices on the I²C Bus

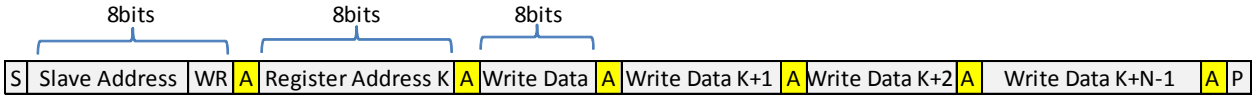
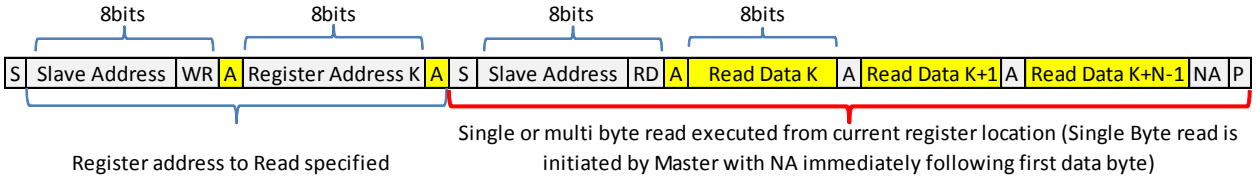
I²C Interface

The FUSB301A includes a full I²C slave controller. The I²C slave fully complies with the I²C specification version 6 requirements. This block is designed for fast mode. Examples of an I²C write and read sequence are shown Figure 5 and Figure 6 respectively.



Note: Single Byte read is initiated by Master with P immediately following first data byte

Figure 5. I²C Write Example



Note: If Register is not specified Master will begin read from current register. In this case only sequence showing in Red bracket is needed

	From Master to Slave	**S**	Start Condition	**NA**	NOT Acknowledge (SDA High)	**RD**	Read =1
	From Slave to Master	**A**	Acknowledge (SDA Low)	**WR**	Write=0	**P**	Stop Condition

Figure 6. I²C Read Example

I²C Address

The I2CADDR bit high or low is indicated in bit3 of the slave address shown in Table 2.

Table 2. FUSB301A I²C Slave Address

DISCLAIMER

FAIRCHILD SEMICONDUCTOR RESERVES THE RIGHT TO MAKE CHANGES WITHOUT FURTHER NOTICE TO ANY PRODUCTS HEREIN TO IMPROVE RELIABILITY, FUNCTION, OR DESIGN. TO OBTAIN THE LATEST, MOST UP-TO-DATE DATASHEET AND PRODUCT INFORMATION, VISIT OUR WEBSITE AT HTTP://WWW.FAIRCHILDSEMI.COM. FAIRCHILD DOES NOT ASSUME ANY LIABILITY ARISING OUT OF THE APPLICATION OR USE OF ANY PRODUCT OR CIRCUIT DESCRIBED HEREIN; NEITHER DOES IT CONVEY ANY LICENSE UNDER ITS PATENT RIGHTS, NOR THE RIGHTS OF OTHERS. THESE SPECIFICATIONS DO NOT EXPAND THE TERMS OF FAIRCHILD'S WORLDWIDE TERMS AND CONDITIONS, SPECIFICALLY THE WARRANTY THEREIN, WHICH COVERS THESE PRODUCTS.

AUTHORIZED USE

Unless otherwise specified in this data sheet, this product is a standard commercial product and is not intended for use in applications that require extraordinary levels of quality and reliability. This product may not be used in the following applications, unless specifically approved in writing by a Fairchild officer: (1) automotive or other transportation, (2) military/aerospace, (3) any safety critical application – including life critical medical equipment – where the failure of the Fairchild product reasonably would be expected to result in personal injury, death or property damage. Customer's use of this product is subject to agreement of this Authorized Use policy. In the event of an unauthorized use of Fairchild's product, Fairchild accepts no liability in the event of product failure. In other respects, this product shall be subject to Fairchild's Worldwide Terms and Conditions of Sale, unless a separate agreement has been signed by both Parties.

ANTI-COUNTERFEITING POLICY

Fairchild Semiconductor Corporation's Anti-Counterfeiting Policy. Fairchild's Anti-Counterfeiting Policy is also stated on our external website, www.fairchildsemi.com, under Terms of Use

Counterfeiting of semiconductor parts is a growing problem in the industry. All manufacturers of semiconductor products are experiencing counterfeiting of their parts. Customers who inadvertently purchase counterfeit parts experience many problems such as loss of brand reputation, substandard performance, failed applications, and increased cost of production and manufacturing delays. Fairchild is taking strong measures to protect ourselves and our customers from the proliferation of counterfeit parts. Fairchild strongly encourages customers to purchase Fairchild parts either directly from Fairchild or from Authorized Fairchild Distributors who are listed by country on our web page cited above. Products customers buy either from Fairchild directly or from Authorized Fairchild Distributors are genuine parts, have full traceability, meet Fairchild's quality standards for handling and storage and provide access to Fairchild's full range of up-to-date technical and product information. Fairchild and our Authorized Distributors will stand behind all warranties and will appropriately address any warranty issues that may arise. Fairchild will not provide any warranty coverage or other assistance for parts bought from Unauthorized Sources. Fairchild is committed to combat this global problem and encourage our customers to do their part in stopping this practice by buying direct or from authorized distributors.

PRODUCT STATUS DEFINITIONS

Definition of Terms

Datasheet Identification	Product Status	Definition
Advance Information	Formative / In Design	Datasheet contains the design specifications for product development. Specifications may change in any manner without notice.
Preliminary	First Production	Datasheet contains preliminary data; supplementary data will be published at a later date. Fairchild Semiconductor reserves the right to make changes at any time without notice to improve design.
No Identification Needed	Full Production	Datasheet contains final specifications. Fairchild Semiconductor reserves the right to make changes at any time without notice to improve the design.
Obsolete	Not In Production	Datasheet contains specifications on a product that is discontinued by Fairchild Semiconductor. The datasheet is for reference information only.
