# 8-bit Atmel Microcontroller with 16/32/64KB In-System Programmable Flash 

## Features

- High performance, low power Atmel ${ }^{\circledR}$ AVR $^{\circledR}$ 8-Bit Microcontroller
- Advanced RISC architecture
- 130 powerful instructions - most single clock cycle execution
- $32 \times 8$ general purpose working registers
- Fully static operation
- Up to 16MIPS throughput at16MHz (Atmel ATmega169A/169PA/649A/649P)
- Up to 20 MIPS throughput at 20MHz (Atmel ATmega329A/329PA/3290A/3290PA/6490A/6490P)
- On-chip 2-cycle multiplier
- High endurance non-volatile memory segments
- In-system self-programmable flash program memory
- 16Kbytes (Atmel ATmega169A/ATmega169PA)
- 32Kbytes (Atmel ATmega329A/ATmega329PA/ATmega3290A/ATmega3290PA)
- 64Kbytes (Atmel ATmega649A/ATmega649P/ATmega6490A/ATmega6490P)
- EEPROM
- 512bytes (ATmega169A/ATmega169PA)
- 1Kbytes (ATmega329A/ATmega329PA/ATmega3290A/ATmega3290PA)
- 2Kbytes (ATmega649A/ATmega649P/ATmega6490A/ATmega6490P)
- Internal SRAM
- 1Kbytes (ATmega169A/ATmega169PA)
- 2Kbytes (ATmega329A/ATmega329PA/ATmega3290A/ATmega3290PA)
- 4Kbytes (ATmega649A/ATmega649P/ATmega6490A/ATmega6490P)
- Write/erase cyles: 10,000 flash/100,000 EEPROM
- Data retention: 20 years at $85^{\circ} \mathrm{C} / 100$ years at $25^{\circ} \mathrm{C}{ }^{(1)}$
- Optional Boot Code Section with Independent Lock Bits
- In-System Programming by On-chip Boot Program
- True read-while-write operation
- Programming lock for software security
- Atmel QTouch ${ }^{\circledR}$ library support
- Capacitive touch buttons, sliders and wheels
- Atmel QTouch and QMatrix acquisition
- Up to 64 sense channels
- JTAG (IEEE std. 1149.1 compliant) Interface
- Boundary-scan capabilities according to the JTAG standard
- Extensive on-chip debug support
- Programming of Flash, EEPROM, Fuses, and Lock Bits through the JTAG Interface
- Peripheral features
$-4 \times 25$ segment LCD driver (ATmega169A/ATmega169PA/ATmega329A/ATmega329PA/ATmega649A/ATmega649P)
$-4 \times 40$ segment LCD driver (ATmega3290A/ATmega3290PA/ATmega6490A/ATmega6490P)
- Two 8-bit Timer/Counters with Separate Prescaler and Compare mode
- One 16-bit Timer/Counter with Separate Prescaler, Compare mode, and Capture mode
- Real Time Counter with separate oscillator
- Four PWM channels
- 8-channel, 10-bit ADC
- Programmable Serial USART
- Master/Slave SPI Serial Interface
- Universal Serial Interface with Start Condition Detector
- Programmable Watchdog Timer with Separate On-chip oscillator
- On-chip analog comparator
- Interrupt and Wake-up on pin change
- Special microcontroller features
- Power-on reset and programmable Brown-out detection
- Internal calibrated oscillator
- External and internal interrupt sources
- Five sleep modes: Idle, ADC Noise Reduction, Power-save, Power-down, and Standby
- I/O and packages
- 54/69 programmable I/O lines
- 64/100-lead TQFP, 64-pad QFN/MLF, and 64-pad DRQFN
- Speed Grade:
- ATmega169A/169PA/649A/649P:
-0-16MHz@1.8-5.5V
- ATmega3290A/3290PA/6490A/6490P:
-0-20MHz@1.8-5.5V
- Temperature range:
$--40^{\circ} \mathrm{C}$ to $85^{\circ} \mathrm{C}$ industrial
- Ultra-low power consumption (picoPower ${ }^{\circledR}$ devices)
- Active mode:
- $1 \mathrm{MHz}, 1.8 \mathrm{~V}: 215 \mu \mathrm{~A}$
- $32 \mathrm{kHz}, 1.8 \mathrm{~V}: 8 \mu \mathrm{~A}$ (including oscillator)
- $32 \mathrm{kHz}, 1.8 \mathrm{~V}: 25 \mu \mathrm{~A}$ (including oscillator and LCD)
- Power-down mode:
- $0.1 \mu \mathrm{~A}$ at 1.8 V
- Power-save mode:
$\cdot 0.6 \mu \mathrm{~A}$ at 1.8 V (Including 32 kHz RTC)
- 750nA at 1.8 V

## 1. Pin configurations

### 1.1 Pinout - 64A (TQFP) and 64M1 (QFN/MLF)

Figure 1-1. Pinout Atmel ATmega169A/ATmega169PA/ATmega329A/ATmega329PA/ATmega649A/ATmega649P.

### 1.2 Pinout - 100A (TQFP)

Figure 1-2. Pinout Atmel ATmega3290A/ATmega3290PA/ATmega6490A/ATmega6490P.
TQFP

Note: The large center pad underneath the QFN/MLF packages is made of metal and internally connected to GND. It should be soldered or glued to the board to ensure good mechanical stability. If the center pad is left unconnected, the package might loosen from the board.

### 1.3 Pinout - 64MC (DRQFN)

Figure 1-3. Pinout Atmel ATmega169A/ATmega169PA.

Table 1-1. DRQFN-64 Pinout ATmega169A/ATmega169PA.
$\left.\begin{array}{|c|c|c|c|c|c|}\hline & \text { PE0 } & & \text { PB7 } & & \text { PG1 (SEG13) } \\ \hline & \text { VLCDCAP } & & \text { PB6 } & & \text { PG0 (SEG14) }\end{array}\right]$ PA2 (COM2)

## 2. Overview

The Atmel ATmega169A/169PA/329A/329PA/3290A/3290PA/649A/649P/6490A/6490P is a low-power CMOS 8-bit microcontroller based on the Atmel ${ }^{\ominus}$ AVR ${ }^{\circledR}$ enhanced RISC architecture. By executing powerful instructions in a single clock cycle, the ATmega169A/169PA/329A/329PA/3290A/3290PA/649A/649P/6490A/6490P achieves throughputs approaching 1 MIPS per MHz allowing the system designer to optimize power consumption versus processing speed.

### 2.1 Block diagram

Figure 2-1. Block diagram.

The AVR core combines a rich instruction set with 32 general purpose working registers. All the 32 registers are directly connected to the Arithmetic Logic Unit (ALU), allowing two independent registers to be accessed in one
single instruction executed in one clock cycle. The resulting architecture is more code efficient while achieving throughputs up to ten times faster than conventional CISC microcontrollers.
The Atmel ATmega169A/169PA/329A/329PA/3290A/3290PA/649A/649P/6490A/6490P provides the following features: $16 \mathrm{~K} / 32 \mathrm{~K} / 64 \mathrm{~K}$ bytes of In-System Programmable Flash with Read-While-Write capabilities, $512 / 1 \mathrm{~K} / 2 \mathrm{~K}$ bytes EEPROM, 1K/2K/4K byte SRAM, 54/69 general purpose I/O lines, 32 general purpose working registers, a JTAG interface for Boundary-scan, On-chip Debugging support and programming, a complete On-chip LCD controller with internal contrast control, three flexible Timer/Counters with compare modes, internal and external interrupts, a serial programmable USART, Universal Serial Interface with Start Condition Detector, an 8-channel, 10-bit ADC, a programmable Watchdog Timer with internal Oscillator, an SPI serial port, and five software selectable power saving modes. The Idle mode stops the CPU while allowing the SRAM, Timer/Counters, SPI port, and interrupt system to continue functioning. The Power-down mode saves the register contents but freezes the Oscillator, disabling all other chip functions until the next interrupt or hardware reset. In Power-save mode, the asynchronous timer and the LCD controller continues to run, allowing the user to maintain a timer base and operate the LCD display while the rest of the device is sleeping. The ADC Noise Reduction mode stops the CPU and all I/O modules except asynchronous timer, LCD controller and ADC, to minimize switching noise during ADC conversions. In Standby mode, the XTAL/resonator Oscillator is running while the rest of the device is sleeping. This allows very fast start-up combined with low-power consumption.
Atmel offers the QTouch library for embedding capacitive touch buttons, sliders and wheels functionality into AVR microcontrollers. The patented charge-transfer signal acquisition offers robust sensing and includes fully debounced reporting of touch keys and includes Adjacent Key Suppression ${ }^{\circledR}$ (AKS ${ }^{\circledR}$ ) technology for unambiguous detection of key events. The easy-to-use QTouch Suite toolchain allows you to explore, develop and debug your own touch applications.
The device is manufactured using the Atmel high density non-volatile memory technology. The On-chip In-System re-Programmable (ISP) Flash allows the program memory to be reprogrammed In-System through an SPI serial interface, by a conventional non-volatile memory programmer, or by an On-chip Boot program running on the AVR core. The Boot program can use any interface to download the application program in the Application Flash memory. Software in the Boot Flash section will continue to run while the Application Flash section is updated, providing true Read-While-Write operation.
By combining an 8-bit RISC CPU with In-System Self-Programmable Flash on a monolithic chip, the ATmega169A/169PA/329A/329PA/3290A/3290PA/649A/649P/6490A/6490P is a powerful microcontroller that provides a highly flexible and cost effective solution to many embedded control applications.
The ATmega169A/169PA/329A/329PA/3290A/3290PA/649A/649P/6490A/6490P AVR is supported with a full suite of program and system development tools including: C Compilers, Macro Assemblers, Program Debugger/Simulators, In-Circuit Emulators, and Evaluation kits.

### 2.2 Comparison between Atmel

ATmega169A/169PA/329A/329PA/649A/649P/3290A/3290PA/6490A/6490P
Table 2-1. Differences between: ATmega169A/169PA/329A/329PA/649A/649P/3290A/3290PA/6490A/6490P.

|  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- |
| ATmega169A | 16Kbyte | 512Bytes | 1Kbyte | $4 \times 25$ |
| ATmega169PA | 16Kbyte | 512Bytes | 1Kbyte | $4 \times 25$ |
| ATmega329A | 32Kbyte | 1Kbyte | 2 Kbyte | $4 \times 25$ |
| ATmega329PA | 32 Kbyte | 1Kbyte | 2 Kbyte | $4 \times 25$ |
| ATmega3290A | 32Kbytes | 1Kbyte | 2 Kbyte | $4 \times 40$ |
| ATmega3290PA | 32Kbyte | 1Kbyte | 2 Kbyte | $4 \times 40$ |

| ATmega649P | 64Kbyte | 2Kbyte | 4 Kbyte | $4 \times 25$ |
| ATmega6490A | 64Kbyte | 2 Kbyte | 4 Kbyte | $4 \times 40$ |
| ATmega6490P | 64 Kbyte | 4 Kbyte | $4 \times 40$ |  |

### 2.3 Pin descriptions

The following section describes the I/O-pin special functions.

### 2.3.1 $\quad \mathrm{V}_{\mathrm{Cc}}$ <br> Digital supply voltage.

### 2.3.2 GND

Ground.

### 2.3.3 Port A (PA7...PAO)

Port A is an 8-bit bi-directional I/O port with internal pull-up resistors (selected for each bit). The Port A output buffers have symmetrical drive characteristics with both high sink and source capability. As inputs, Port A pins that are externally pulled low will source current if the pull-up resistors are activated. The Port A pins are tri-stated when a reset condition becomes active, even if the clock is not running.
Port A also serves the functions of various special features of the Atmel ATmega169A/169PA/329A/329PA/3290A/3290PA/649A/649P/6490A/6490P as listed on page 72.

### 2.3.4 Port B (PB7...PB0)

Port B is an 8-bit bi-directional I/O port with internal pull-up resistors (selected for each bit). The Port B output buffers have symmetrical drive characteristics with both high sink and source capability. As inputs, Port B pins that are externally pulled low will source current if the pull-up resistors are activated. The Port B pins are tri-stated when a reset condition becomes active, even if the clock is not running.
Port B has better driving capabilities than the other ports.
Port $B$ also serves the functions of various special features of the
ATmega169A/169PA/329A/329PA/3290A/3290PA/649A/649P/6490A/6490P as listed on page 73.

### 2.3.5 Port C (PC7...PC0)

Port C is an 8 -bit bi-directional I/O port with internal pull-up resistors (selected for each bit). The Port C output buffers have symmetrical drive characteristics with both high sink and source capability. As inputs, Port C pins that are externally pulled low will source current if the pull-up resistors are activated. The Port C pins are tri-stated when a reset condition becomes active, even if the clock is not running.

Port C also serves the functions of special features of the ATmega169A/169PA/329A/329PA/3290A/3290PA/649A/649P/6490A/6490P as listed on page 76.

### 2.3.6 Port D (PD7...PDO)

Port D is an 8-bit bi-directional I/O port with internal pull-up resistors (selected for each bit). The Port D output buffers have symmetrical drive characteristics with both high sink and source capability. As inputs, Port D pins that are externally pulled low will source current if the pull-up resistors are activated. The Port D pins are tri-stated when a reset condition becomes active, even if the clock is not running.

Port D also serves the functions of various special features of the ATmega169A/169PA/329A/329PA/3290A/3290PA/649A/649P/6490A/6490P as listed on page 77.

### 2.3.7 Port E (PE7...PE0)

Port E is an 8-bit bi-directional I/O port with internal pull-up resistors (selected for each bit). The Port E output buffers have symmetrical drive characteristics with both high sink and source capability. As inputs, Port E pins that
are externally pulled low will source current if the pull-up resistors are activated. The Port E pins are tri-stated when a reset condition becomes active, even if the clock is not running.
Port $E$ also serves the functions of various special features of the ATmega169A/169PA/329A/329PA/3290A/3290PA/649A/649P/6490A/6490P as listed on page 79.

### 2.3.8 Port F (PF7...PF0)

Port $F$ serves as the analog inputs to the A/D Converter.
Port F also serves as an 8-bit bi-directional I/O port, if the A/D Converter is not used. Port pins can provide internal pull-up resistors (selected for each bit). The Port F output buffers have symmetrical drive characteristics with both high sink and source capability. As inputs, Port F pins that are externally pulled low will source current if the pull-up resistors are activated. The Port F pins are tri-stated when a reset condition becomes active, even if the clock is not running. If the JTAG interface is enabled, the pull-up resistors on pins PF7(TDI), PF5(TMS), and PF4(TCK) will be activated even if a reset occurs.
Port F also serves the functions of the JTAG interface.

### 2.3.9 Port G (PG5...PG0)

Port G is a 6-bit bi-directional I/O port with internal pull-up resistors (selected for each bit). The Port G output buffers have symmetrical drive characteristics with both high sink and source capability. As inputs, Port $G$ pins that are externally pulled low will source current if the pull-up resistors are activated. The Port G pins are tri-stated when a reset condition becomes active, even if the clock is not running.
Port G also serves the functions of various special features of the ATmega169A/169PA/329A/329PA/3290A/3290PA/649A/649P/6490A/6490P as listed on page 83.

### 2.3.10 Port H (PH7...PHO)

Port H is a 8-bit bi-directional I/O port with internal pull-up resistors (selected for each bit). The Port H output buffers have symmetrical drive characteristics with both high sink and source capability. As inputs, Port H pins that are externally pulled low will source current if the pull-up resistors are activated. The Port H pins are tri-stated when a reset condition becomes active, even if the clock is not running.
Port H also serves the functions of various special features of the ATmega3290PA/6490P as listed on page 85.

### 2.3.11 Port J (PJ6...PJO)

Port $J$ is a 7-bit bi-directional I/O port with internal pull-up resistors (selected for each bit). The Port J output buffers have symmetrical drive characteristics with both high sink and source capability. As inputs, Port J pins that are externally pulled low will source current if the pull-up resistors are activated. The Port J pins are tri-stated when a reset condition becomes active, even if the clock is not running.
Port J also serves the functions of various special features of the ATmega3290PA/6490P as listed on page 87.

## $\overline{\text { 2.3.12 }} \overline{\text { RESET }}$

Reset input. A low level on this pin for longer than the minimum pulse length will generate a reset, even if the clock is not running. The minimum pulse length is given in "System and reset characteristics" on page 332. Shorter pulses are not guaranteed to generate a reset.

### 2.3.13 XTAL1

Input to the inverting Oscillator amplifier and input to the internal clock operating circuit.

### 2.3.14 XTAL2

Output from the inverting Oscillator amplifier.

### 2.3.15 AVCC

AVCC is the supply voltage pin for Port $F$ and the $A / D$ Converter. It should be externally connected to $V_{C C}$, even if the $A D C$ is not used. If the $A D C$ is used, it should be connected to $V_{c C}$ through a low-pass filter.

### 2.3.16 AREF

This is the analog reference pin for the A/D Converter.

### 2.3.17 LCDCAP

An external capacitor (typical $>470 \mathrm{nF}$ ) must be connected to the LCDCAP pin as shown in Figure 24-2, if the LCD module is enabled and configured to use internal power. This capacitor acts as a reservoir for LCD power ( $V_{\text {LCD }}$ ). A large capacitance reduces ripple on $\mathrm{V}_{\mathrm{LCD}}$ but increases the time until $\mathrm{V}_{\mathrm{LCD}}$ reaches its target value.

## 3. Resources

A comprehensive set of development tools, application notes and datasheets are available for download on http://www.atmel.com/avr.

## 4. Data retention

Reliability Qualification results show that the projected data retention failure rate is much less than 1 PPM over 20 years at $85^{\circ} \mathrm{C}$ or 100 years at $25^{\circ} \mathrm{C}$.

## 5. About code examples

This documentation contains simple code examples that briefly show how to use various parts of the device. These code examples assume that the part specific header file is included before compilation. Be aware that not all C compiler vendors include bit definitions in the header files and interrupt handling in C is compiler dependent.
Please confirm with the C compiler documentation for more details.
For I/O Registers located in extended I/O map, "IN", "OUT", "SBIS", "SBIC", "CBI", and "SBI" instructions must be replaced with instructions that allow access to extended I/O. Typically "LDS" and "STS" combined with "SBRS", "SBRC", "SBR", and "CBR".

## 6. Capacitive touch sensing

The Atmel ${ }^{\circledR}$ QTouch ${ }^{\circledR}$ Library provides a simple to use solution to realize touch sensitive interfaces on most Atmel $A V R^{\circledR}$ microcontrollers. The QTouch Library includes support for the QTouch and QMatrix ${ }^{\circledR}$ acquisition methods.

Touch sensing can be added to any application by linking the appropriate Atmel QTouch Library for the AVR Microcontroller. This is done by using a simple set of APIs to define the touch channels and sensors, and then calling the touch sensing APl's to retrieve the channel information and determine the touch sensor states.
The QTouch Library is FREE and downloadable from the Atmel website at the following location: www.atmel.com/qtouchlibrary. For implementation details and other information, refer to the Atmel QTouch Library User Guide - also available for download from the Atmel website.

## 7. Register summary

Note: $\quad$ Registers with bold type only available in Atmel ATmega3290A/3290PA/6490A/6490P.

Notes: 1. For compatibility with future devices, reserved bits should be written to zero if accessed. Reserved I/O memory addresses should never be written.
2. I/O Registers within the address range $0 \times 00-0 \times 1 \mathrm{~F}$ are directly bit-accessible using the SBI and CBI instructions. In these registers, the value of single bits can be checked by using the SBIS and SBIC instructions.
3. Some of the Status Flags are cleared by writing a logical one to them. Note that, unlike most other AVRs, the CBI and SBI instructions will only operate on the specified bit, and can therefore be used on registers containing such Status Flags. The CBI and SBI instructions work with registers $0 \times 00$ to $0 \times 1 \mathrm{~F}$ only.
4. When using the $I / O$ specific commands $I N$ and OUT, the I/O addresses $0 \times 00-0 \times 3 \mathrm{~F}$ must be used. When addressing I/O Registers as data space using LD and ST instructions, $0 \times 20$ must be added to these addresses. The Atmel ATmega169A/169PA/329A/329PA/3290A/3290PA/649A/649P/6490A/6490P is a complex microcontroller with more peripheral units than can be supported within the 64 location reserved in Opcode for the IN and OUT instructions. For the Extended I/O space from 0x60-0xFF in SRAM, only the ST/STS/STD and LD/LDS/LDD instructions can be used.

## 8. Instruction set summary

| Mnemonics | Operands | Description | Operation | Flags | \#Clocks |
| :---: | :---: | :---: | :---: | :---: | :---: |
| ARITHMETIC AND LOGIC INSTRUCTIONS |  |  |  |  |  |
| ADD | Rd, Rr | Add two Registers | $\mathrm{Rd} \leftarrow \mathrm{Rd}+\mathrm{Rr}$ | Z,C,N,V,H | 1 |
| ADC | Rd, Rr | Add with Carry two Registers | $\mathrm{Rd} \leftarrow \mathrm{Rd}+\mathrm{Rr}+\mathrm{C}$ | Z,C,N,V,H | 1 |
| ADIW | Rdl, K | Add Immediate to Word | Rdh:Rdl $\leftarrow$ Rdh:Rdl + K | Z,C,N,V,S | 2 |
| SUB | Rd, Rr | Subtract two Registers | $\mathrm{Rd} \leftarrow \mathrm{Rd}-\mathrm{Rr}$ | Z,C,N,V,H | 1 |

|  |  | ATmega169A-AN <br> ATmega169A-ANR <br> ATmega169A-MN <br> ATmega169A-MNR | 64A <br> 64A <br> 64M1 <br> 64M1 | Extended <br> $\left(-40^{\circ} \mathrm{C}\right.$ to $\left.105^{\circ} \mathrm{C}\right)$ |

Notes: 1. This device can also be supplied in wafer form. Please contact your local Atmel sales office for detailed ordering information and minimum quantities.
2. Pb-free packaging, complies to the European Directive for Restriction of Hazardous Substances (RoHS directive). Also Halide free and fully Green.
3. For Speed vs. $\mathrm{V}_{\mathrm{CC}}$, see Figure 29-1 on page 330.
4. Tape \& Reel.

### 9.2 Atmel ATmega169PA

| Speed [MHz] ${ }^{(3)}$ | Power supply | Ordering code ${ }^{(2)}$ | Package type ${ }^{(1)}$ | Operational range |
| :---: | :---: | :---: | :---: | :---: |

Notes: 1. This device can also be supplied in wafer form. Please contact your local Atmel sales office for detailed ordering information and minimum quantities.
2. Pb-free packaging complies to the European Directive for Restriction of Hazardous Substances (RoHS directive). Also Halide free and fully Green.
3. For Speed vs. $V_{C C}$ see Figure 29-2 on page 330.
4. Tape \& Reel.
5. See characterization specification at $105^{\circ} \mathrm{C}$.

## Package type

100-lead, $14 \times 14 \times 1.0 \mathrm{~mm}, 0.5 \mathrm{~mm}$ Lead Pitch, Thin Profile Plastic Quad Flat Package (TQFP)

## 10. Packaging Information

### 10.1 64A

COMMON DIMENSIONS
(Unit of measure $=\mathrm{mm}$ )

## Notes:

1.This package conforms to JEDEC reference MS-026, Variation AEB.
2. Dimensions D1 and E1 do not include mold protrusion. Allowable protrusion is 0.25 mm per side. Dimensions D1 and E1 are maximum plastic body size dimensions including mold mismatch.
3. Lead coplanarity is 0.10 mm maximum.

## 11. Errata

### 11.1 Atmel ATmega169A

No known errata

### 11.2 Atmel ATmega169A/169PA Rev. A to F

Not sampled.

### 11.3 Atmel ATmega169PA Rev. G

No known errata.

### 11.4 Atmel ATmega329A/329PA rev. A

- Interrupts may be lost when writing the timer registers in the asynchronous timer
- Using BOD disable will make the chip reset

1. Interrupts may be lost when writing the timer registers in the asynchronous timer

The interrupt will be lost if a timer register that is synchronous timer clock is written when the asynchronous Timer/Counter register (TCNTx) is $0 \times 00$.

## Problem Fix/ Workaround

Always check that the asynchronous Timer/Counter register neither have the value 0xFF nor $0 \times 00$ before writing to the asynchronous Timer Control Register (TCCRx), asynchronous Timer Counter Register (TCNTx), or asynchronous Output Compare Register (OCRx).
2. Using BOD disable will make the chip reset

If the part enters sleep with the BOD turned off with the BOD disable option
enabled, a BOD reset will be generated at wakeup and the chip will reset.
Problem Fix/Workaround
Do not use BOD disable

### 11.5 Atmel ATmega329A/329PA rev. B

- Interrupts may be lost when writing the timer registers in the asynchronous timer

1. Interrupts may be lost when writing the timer registers in the asynchronous timer

The interrupt will be lost if a timer register that is synchronous timer clock is written when the asynchronous Timer/Counter register (TCNTx) is $0 \times 00$.

## Problem Fix/ Workaround

Always check that the asynchronous Timer/Counter register neither have the value 0xFF nor $0 \times 00$ before writing to the asynchronous Timer Control Register (TCCRx), asynchronous Timer Counter Register (TCNTx), or asynchronous Output Compare Register (OCRx).

### 11.6 Atmel ATmega329A/329PA rev. C

- Interrupts may be lost when writing the timer registers in the asynchronous timer

1. Interrupts may be lost when writing the timer registers in the asynchronous timer

The interrupt will be lost if a timer register that is synchronous timer clock is written when the asynchronous Timer/Counter register (TCNTx) is $0 \times 00$.

## Problem Fix/ Workaround

Always check that the asynchronous Timer/Counter register neither have the value 0xFF nor 0x00 before writing to the asynchronous Timer Control Register (TCCRx), asynchronous Timer Counter Register (TCNTx), or asynchronous Output Compare Register (OCRx).

### 11.7 Atmel ATmega3290A/3290PA rev. A

- Interrupts may be lost when writing the timer registers in the asynchronous timer
- Using BOD disable will make the chip reset

1. Interrupts may be lost when writing the timer registers in the asynchronous timer

The interrupt will be lost if a timer register that is synchronous timer clock is written when the asynchronous Timer/Counter register (TCNTx) is $0 x 00$.

## Problem Fix/ Workaround

Always check that the asynchronous Timer/Counter register neither have the value 0xFF nor 0x00 before writing to the asynchronous Timer Control Register (TCCRx), asynchronous Timer Counter Register (TCNTx), or asynchronous Output Compare Register (OCRx).
2. Using BOD disable will make the chip reset

If the part enters sleep with the BOD turned off with the BOD disable option enabled, a BOD reset will be generated at wakeup and the chip will reset.

Problem Fix/Workaround
Do not use BOD disable

### 11.8 Atmel ATmega3290A/3290PA rev. B

- Interrupts may be lost when writing the timer registers in the asynchronous timer

1. Interrupts may be lost when writing the timer registers in the asynchronous timer

The interrupt will be lost if a timer register that is synchronous timer clock is written when the asynchronous Timer/Counter register (TCNTx) is $0 x 00$.

## Problem Fix/ Workaround

Always check that the asynchronous Timer/Counter register neither have the value 0xFF nor $0 \times 00$ before writing to the asynchronous Timer Control Register (TCCRx), asynchronous Timer Counter Register (TCNTx), or asynchronous Output Compare Register (OCRx).

### 11.9 Atmel ATmega3290A/3290PA rev. C

- Interrupts may be lost when writing the timer registers in the asynchronous timer

1. Interrupts may be lost when writing the timer registers in the asynchronous timer

The interrupt will be lost if a timer register that is synchronous timer clock is written when the asynchronous Timer/Counter register (TCNTx) is $0 x 00$.

## Problem Fix/ Workaround

Always check that the asynchronous Timer/Counter register neither have the value 0xFF nor 0x00 before writing to the asynchronous Timer Control Register (TCCRx), asynchronous Timer Counter Register (TCNTx), or asynchronous Output Compare Register (OCRx).

### 11.10 Atmel ATmega649A/649P/ATmega6490A/6490P

No known errata.

## 12. Datasheet revision history

Please note that the referring page numbers in this section are referring to this document. The referring revision in this section are referring to the document revision.

### 12.1 Rev. 8284F - 08/2014

1. New back page
2. Changed chip references in the text in Section 9.6 "Low-frequency XTAL oscillator" on page 34.

### 12.2 Rev. 8284E-02/2013

1. New template
2. Countless, small corrections made throughout the whole document
3. In Section "System and reset characteristics" on page 332 the sentence "The following chara apply only to..." has been deleted
Former Section 29.6 on page 332 ("Power-on reset"), subsection 29.6.1
4. ("ATmega169A/169PA/329A/329PA/3290A/3290PA/649A/649P/6490A/6490PA revision C and later") and subsection 29.6.2 ("ATmega329A/329PA/3290A/3290PA/649A/649P/6490A/6490PA revision A and B") have been deleted
5. The maximum limits for "Power Supply Current" in Table 29-9 on page 328 have been corrected
6. The maximum limits for "Power Supply Current" in Table 29-11 on page 329 have been corrected
7. Added "Electrical Characteristics - TA $=-40^{\circ} \mathrm{C}$ to $105^{\circ} \mathrm{C}$ " on page 337 .
8. Added "Typical Characteristics - TA $=-40^{\circ} \mathrm{C}$ to $105^{\circ} \mathrm{C}$ " on page 658 .
9. Updated "Ordering information" on page 20

### 12.3 Rev. 8284D - 06/11

1. Removed "Preliminary" from the front page
2. Updated the Table $29-16$ on page 344 . $\mathrm{V}_{\mathrm{POT}}$ falling / Min. is 0.05 V , not 0.5 V

### 12.4 Rev. 8284C - 06/11

1. Updated "Signature Bytes" on page 294. A, P, and PA devices have different signature (0x002) bytes.
2. Updated all "DC Characteristics" on page 323.

### 12.5 Rev. 8284B-03/11

1. Updated the datasheet according to the Atmel new Brand Style Guide.
2. Updated all "Ordering information" on page 20.
3. Updated "Packaging Information" on page 30.

### 12.6 Rev. 8284A - $10 / 10$

1. Initial revision
