

## ITS41k0S-ME-N

Smart High-Side NMOS-Power Switch

## Data Sheet

Rev 1.0, 2012-09-01

## Standard Power

### Smart High-Side NMOS-Power Switch

#### ITS41k0S-ME-N

1 Overview

#### Features

- Current controlled input
- Capable of driving all kind of loads (inductive, capacitive and resitive)
- Negative voltage clamped at output with inductive loads
- Current limitation
- · Very low standby current
- Thermal shutdown with restart
- Overload protection
- Short circuit protection
- Overvoltage protection (including load dump)
- Reverse battery protection
- Loss of GND and loss of Vbb protection
- ESD-Protection
- Improved electromagnetic compatibility (EMC)
- Green Product (RoHS compliant)

ITS41k0S-ME-N is not qualified and manufactured according to the requirements of Infineon Technologies with regards to automotive and/or transportation applications.

#### Description

The ITS41k0S-ME-N is a protected 1  $\Omega$  single channel Smart High-Side NMOS-Power Switch in a PG-SOT223-4 package with charge pump and current controlled input, monolithically integrated in a smart power technology.

#### **Product Summary**

Overvoltage protection  $V_{SAZ min}$ = 62V Operating voltage range 4,9V <  $V_S$  < 60V On-state resistance  $R_{DSON}$  typ 800 m $\Omega$ Operating Temperature range Tj = -40°C to 125°C

#### Application

- · All types of resistive, inductive and capacitive loads
- Current controlled power switch for 12V, 24V and 45V DC in industrial applications
- Driver for electromagnetic relays
- Signal amplifier

1) Not subject to production test, specified by design

Device on 50mm\*50mm\*1.5mm epoxy PCB FR4 with 6 cm2 (one layer, 70mm thick) copper area for Vbb connection. PCB is vertical without blown air

3) ESD susceptibility HBM according to EIA/JESD 22-A 114.

Note: Exposure to absolute maximum rating conditions for extended periods may affect device reliability. Integrated protection functions are designed to prevent IC destruction under fault conditions described in the data sheet. Fault conditions are considered as "outside" the normal operating range. Protection functions are not designed for continuous or repetitive operation.

**General Product Characteristics** 

#### 4.2 Functional Range

#### Table 2Functional Range

Parameter	Symbol	Values		Values		Note /	Number
		Min.	Тур.	Max.		Test Condition	
Nominal Operating Voltage	Vs	4.9	-	60	V	$V_{\rm S}$ increasing	4.2.1

Note: Within the functional range the IC operates as described in the circuit description. The electrical characteristics are specified within the conditions given in the related electrical characteristics table.

#### 4.3 Thermal Resistance

This thermal data was generated in accordance with JEDEC JESD51 standards.

More information on www.jedec.org.

#### Table 3Thermal Resistance1)

Parameter	Symbol	Values			Unit	Note /	Number

1) Nominal Load Current is limited by the current limitation; see protection function data

2) Device on 50mm x 50mm x 1,5mm epoxy FR4 PCB with 6cm<sup>2</sup> (one layer copper 70um thick) copper area for supply voltage connection. PCB in vertical position without blown air

3) Timing values only with high input slewrates ( $t_{rIN} = t_{fIN} \le 50$ ns); otherwise slower

4) Not tested in production

5) Integrated protection functions are designed to prevent IC destruction under fault conditions described in the data sheet. Fault conditions are considered as "outside" normal operating range. Protection functions are not designed for continuous repetitive operation.

6) Driver circuit must be able to sink currents > 1mA

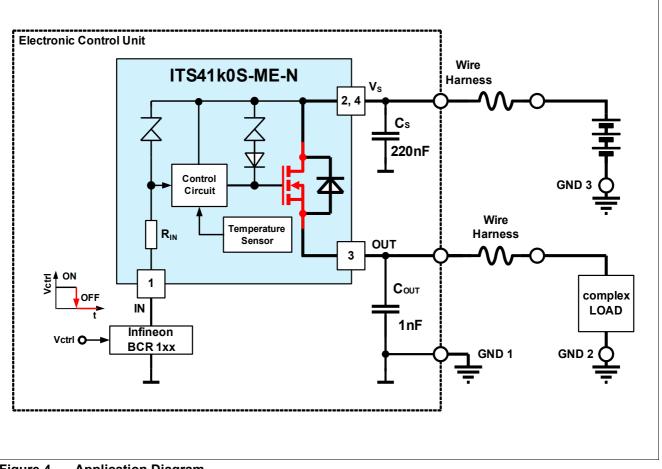

**Application Information** 

## 6 Application Information

### 6.1 Application Diagram

The following information is given as a hint for the implementation of the device only and shall not be regarded as a description or warranty for a certain functionality, condition or quality of the device.

#### Figure 4 Application Diagram

The **ITS41k0S-ME-N** can be connected directly to a supply network. It is recommended to place a ceramic capacitor (e.g.  $C_{\rm S}$  = 220nF) between supply and GND to avoid line disturbances. Wire harness inductors/resistors are sketched in the application circuit above.

The complex load (resistive, capacitive or inductive) must be connected to the output pin OUT.

A built-in current limit protects the device against destruction.

The ITS41k0S-ME-N can be switched on and off with a low power levelshifter switch e.g. Infineon BCR1xx.

The IN pin must be pulled down to GND potential to switch the **ITS41k0S-ME-N** on. If no current is pulled down, the IN-node will float up to  $V_{\rm S}$  potential by an internal pull up. In this mode the **ITS41k0S-ME-N** is deactivated with very low current consumption.

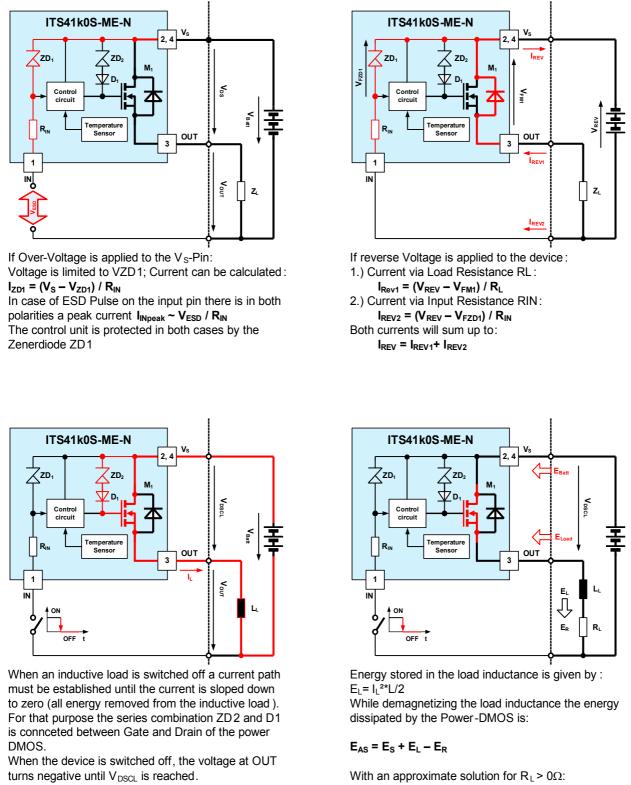

The output voltage slope is controlled during on and off transistion to minimize emissions. Only a small Cercap  $C_{\text{OUT}}$ =1nF is recommended to attenuate RF noise.

In the following chapters the main features, some typical waverforms and the protection behaviour of the **ITS41k0S-ME-N** is shown. For further details please refer to application notes on the Infineon homepage.

#### **Application Information**

#### 6.2 Special features

The Voltage on the incutive load is the difference between  $V_{\text{DSCL}}$  and  $V_{\text{S}}.$

#### **Typical Performance Characteristics**

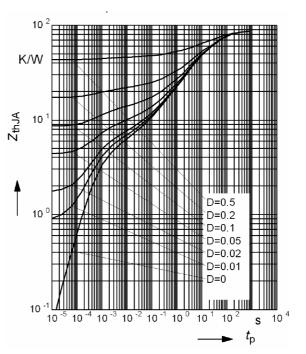

Transient Thermal Impedance  $Z_{thJA}$  versus Pulse Time  $t_p$  @ 6cm<sup>2</sup> heatsink area (D=  $t_p/T$ )

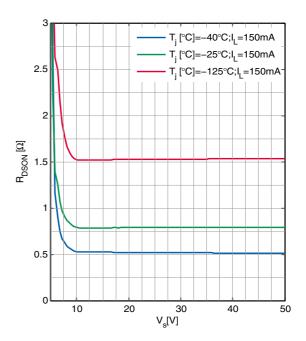

On-Resistance  $R_{\text{DSON}}$  versus Junction Temperature  $T_J$  @ =  $V_s$  = 9V;  $I_L$  =150mA

Transient Thermal Impedance  $Z_{thJA}$  versus Pulse Time  $t_p$  @ min. footprint (D=  $t_p/T$ )

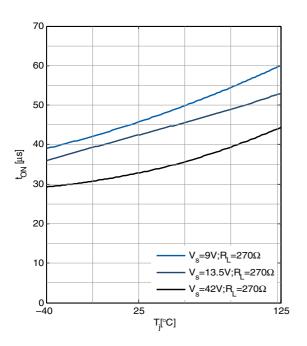

On-Resistance  $R_{\text{DSON}}$  versus Supply Voltage  $V_{\text{S}} = V_{\text{bb}} @= I_{\text{L}} = 150 \text{mA} T_{\text{i}} = \text{par.}$ 

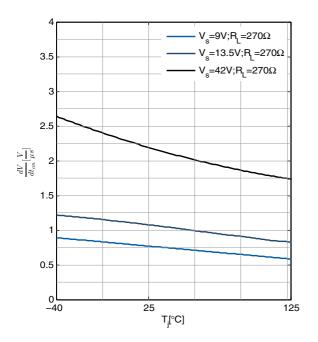

#### **Typical Performance Characteristics**

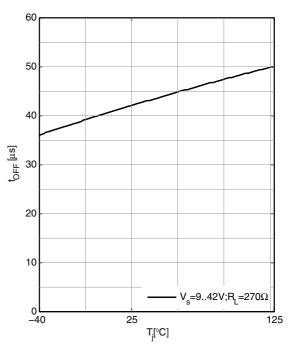

Switch ON Time  $t_{ON}$  versus Junction Temperature  $T_J @= R_L = 270 \Omega$ ;  $V_S = par$ .

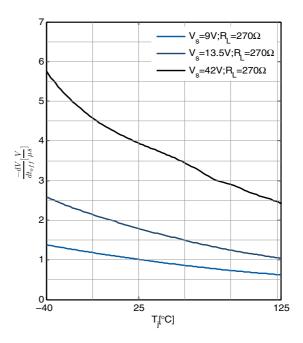

ON Slewrate  $SR_{ON}$  versus Junction Temperature  $T_J$  @ =  $R_L$  = 270  $\Omega$ ;  $V_S$  = par.

Switch OFF Time  $t_{OFF}$  versus Junction Temperature  $T_J$  @ =  $R_L$  = 270  $\Omega$ ;  $V_S$  = par.

OFF Slewrate  $SR_{OFF}$  versus Junction Temperature  $T_J$  @ =  $R_L$  = 270  $\Omega$ ;  $V_S$  = par.

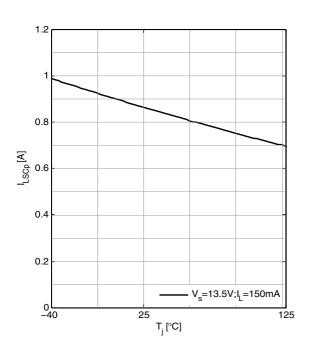

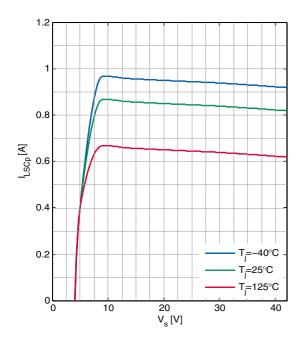

#### **Typical Performance Characteristics**

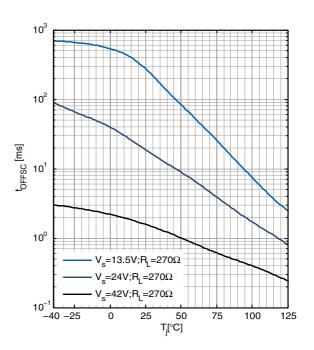

Initial Peak Short Circuit Current Limit  $I_{LSCP}$  versus Junction Temperature  $T_J @ V_S = 13.5V$ ;  $t_m = 100 \mu s$ 

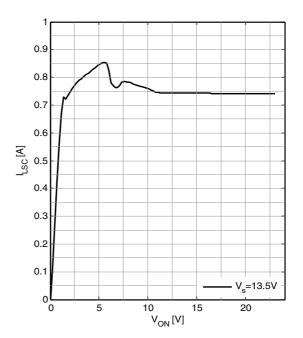

Initial Peak Short Circuit Current Limit  $I_{LSCP}$  versus Supply Voltage  $V_{S} = V_{bb} @ T_{j}$  =par.= 100µs.

Initial Short Circuit Shutdown Time  $t_{OFF SC}$  versus Junction Start-Temperature  $T_{JSTART}$ ;  $V_{S}$ =parameter

Current Limitation Characteristic  $I_{LSC}$  versus Drain Source Voltage Drop  $V_{DS}$  @  $V_{S}$  =13.5 V

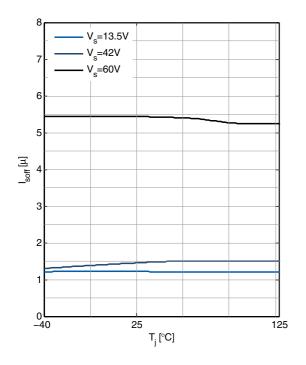

#### **Typical Performance Characteristics**

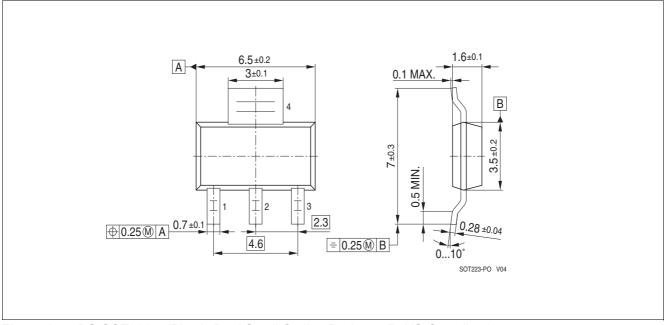

# Stand By Current Consumption $I_{\text{SOFF}}$ versus Junction Temperature $T_J$ @ pin IN open

#### Package Outlines and Footprint

## 8 Package Outlines and Footprint

To meet the world-wide customer requirements for environmentally friendly products and to be compliant with government regulations the device is available as a green product. Green products are RoHS-Compliant (i.e Pb-free finish on leads and suitable for Pb-free soldering according to IPC/JEDEC J-STD-020
